Emergency Sewer Repair in Remediation Area:

On April 28 and 29, 2019, Amphenol's consultant, IWM Consulting Group, assisted the City of Franklin with the emergency repair of a small collapse along a sewer segment on N. Forsythe St., north of Ross Court. The sewer segment is within an area of contaminated soil that EPA has identified for remediation. IWM is overseeing containment of approximately 50 cubic yards of excavated soil around the sewer segment within five "roll-off" boxes that will be stored temporarily on the former Amphenol property. The soil will be sampled and sent to the appropriate landfill, based on IDEM requirements.

To accommodate the repair and with EPA concurrence, IWM turned off the on-site groundwater remediation system, which discharges treated groundwater to the sewer line. Treatment system operations will resume May 2, 2019.

The treatment system is turned off periodically for maintenance and adjustments. When the system is shut down, groundwater stays in place rather than being pumped to the treatment system. Temporary shutdowns pose no risk to residents.

The City completed the sewer repairs on April 29 by replacing a 15-foot segment of the sewer. For more information on the repair, please contact the City of Franklin.

Thanks.
